# ABOUT US

A cryptocurrency is a medium of exchange such as the US dollar, but is digital and uses cryptographic techniques and its protocol to verify the transfer of funds and control the creation of monetary units. The Crypto Co is a United States-based company. It is engaged in the business of providing consulting services and education for distributed ledger technologies (blockchain) for the building of technological infrastructure and enterprise blockchain technology solutions.

# WHAT IS OPTION TRADING

Options trading is a financial strategy that involves buying or selling options contracts. These contracts give the buyer the right to buy or sell an asset at a predetermined price and date. When you trade options, you're essentially placing a bet on if a stock will decrease, increase or remain the same in value; how much it will deviate from its current price; and in what time those changes will occur. Based on those parameters, you can choose to enter into a contract to buy or sell a company's stock.

# Understanding an Option Contract

An **option contract** is an agreement that gives the buyer the **right** (but not the obligation) to buy or sell an underlying asset at a predetermined price (the **strike price**) on or before a specific expiration date.

## Risks and Rewards of Buying Options:

- ✓ The maximum loss is the premium you paid for the option.
- ✓ The maximum gain is unlimited for call options (if the stock rises indefinitely) or the strike price minus the premium for put options (if the stock falls to zero).

## Selling an Option (Short Position)

**Sell a Call Option:** If you believe the price of an asset will not rise above a certain price, you can sell a **call option**. This obligates you to sell the asset to the option buyer at the strike price if they choose to exercise the option.

Example: You sell a call option on stock XYZ at a strike price of \$55 for a \$3 premium. If the stock stays below \$55, you keep the \$3 premium. However, if the stock rises above \$55, you must sell the stock at \$55, even if it's worth more on the market.

# WHAT IS CRYPTOCURRENCY

Cryptocurrency is a digital or virtual currency secured by cryptography, functioning as a decentralized digital payment system that doesn't rely on a central bank, and transactions are recorded on a public, distributed ledger called a blockchain. Cryptocurrency, or crypto, is virtual or digital assets purchased with real money (\$, £) traded on blockchain technology. It does not have all the values of real or fiat currencies. Cryptocurrencies, like Bitcoin and Ethereum, are different from stocks and real money. In 2021, the government is exploring the creation of a state-backed digital currency issued by the Reserve Bank of India, while banning private ones like bitcoin. At present, India neither prohibits nor allows investment in the cryptocurrency market.

# WHAT IS CRYPTO TRADING

Cryptocurrency trading is the act of speculating on cryptocurrency price movements via a CFD trading account, or buying and selling the underlying coins via an exchange. Cryptocurrency is digital money that doesn't require a bank or financial institution to verify transactions and can be used for purchases or as an investment. Transactions are then verified and recorded on a blockchain, an unchangeable ledger that tracks and records assets and trades. Key Takeaways. Cryptocurrency offers multiple ways to earn money, including trading, dividends, and running master nodes. The market's volatility presents both opportunities and significant risks. Thorough research and strategic planning are essential to avoid common investment pitfalls.
